                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This protein comprises Staphylococcus aureus collagen binding CC protein (CBP) epitope M31, i.e. amino acids 61-343 of full-length CC BP, plus a vector-derived N-terminal peptide. Claimed 441, 849 CC and 1500 bp nucleic acid sequences (see AAT93436-38) respectively ce encode CBP epitopes M17, M31 and M55 (see AAW31552-54) that confer CC protection against S. aureus infection. These nucleic acid sequences can be used in the recombinant production of the CBP cepitopes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The claimed nucleic acids as well as claimed anti-CBP antibodies will also be of use in composition and methods for the prevention of composition in an animal such as a human. The CBP concerns are also contemplated for use in the preparation of concerns and as carrier proteins in vaccine formulations, as well as in the formulation of compositions for the prevention of s.

                                                                                                                                                                                                                                                                                                                                                                                                                                        protein (CBP) epitope M55, i.e. amino acids 30-531 of full-length CC CBP, plus a vector-derived N-terminal peptide. Claimed 441, 849 cc and 1500 bp nucleic acid sequences (see AAT93136-38) respectively cc encode CBP epitopes M17, M31 and M55 (see AAW31552-54) that confer protection against S. aureus infection. These nucleic acid sequences can be used in the recombinant production of the CBP cepitopes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The claimed nucleic acids as well as claimed anti-CBP antibodies will also be of use in composition and methods for the prevention of bacterial colonisation in an animal such as a human. The CBP carrier also contemplated for use in the preparation of contemplated for use in the preparation of sein the formulation of compositions for the prevention of S.

                The amino acid sequence (encoded by the sequence assembled from partially homologous pl6 and cCOLR6A inserts) comprises a structure resembling a signal sequence. Following this region, a region called A is found followed by a repetitive stretch of 187 amino acids called B1, B2 and B3. Directly following these regions there is a region called W which consists of a repetitive, hydrophilic
  structure contg. several proline residues.
                                                                                                                                                                                                                                                    Hybrid DNA molecule encoding S.aureus collagen binding protein protein is expressed in E.coli and used for diagnosis e.g. of
                                                                                                                                                                                                                                                                                                                              WPI; 1992-167099/20.

The amino acid sequence nearest to the C-terminal end consists of a long stretch of hydrophobic residues followed by some charged amino acids This region is called M.

The CBP can be used for immunisation pref. in combination with a fusion protein, e.g. for vaccination of ruminants against mastitis caused by staphylococcal infections. It can also be used to block infection in an open skin wound, e.g. for blocking protein receptors or by immunisation. In the latter, the host produces specific antibodies which block the adherence of the bacterial strains to damaged tissue. This treatment can be used for septic arthritis membranes. Dosage for immunisation is 0.5-5 microg CBP/kg; for topical admin. the protein is used at a concn. of 25-250 microg/ml.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein (CBP) epitope M17, i.e. amino acids 151-297 of full-length CBP, plus a vector-derived N-terminal peptide. Claimed 441, 849 and 1500 be nucleic acid sequences (see AAT93436-38) respectively encode CBP epitopes M17, M31 and M55 (see AAW31552-54) that confer protection against S. aureus infection. These nucleic acid sequences can be used in the recombinant production of the CBP epitopes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to colladge. The claimed nucleic acids as well as claimed anti-CBP antibodies will also be of use in screening, diagnostic and therapeutic applications including active and passive immunisation and methods for the prevention of pactorial colonisation and methods for the prevention of pactorial according active that the prevention of the CBP protein and methods for the prevention of pactorial according active that the prevention of the CBP protein and methods for the prevention of the CBP protein according to the prevention of the CBP protein and methods for the prevention of the CBP protein according to the CBP protein according to the protein according to the protein according to the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bacterial colonisation in an animal such as a human. The CBI epitopes are also contemplated for use in the preparation of vaccines and as carrier proteins in vaccine formulations, as as in the formulation of compositions for the prevention of s

Ace protein is an extracellular matrix-binding protein, which can bind with collagens such as collagen type I and type IV and with lamins. Ace protein can be used to inhibit attachment of enterococci to collagen and to treat or prevent enterococcal infections, specifically as a vaccine. The present sequence is the collagen binding domain of Ace protein.

microbial surface component regonising adhesive matrix molecule (MSCRAMM) derivative pCF33, plus a vector-derived N-terminal peptide. The invention relates to claimed nucleic acid sequences (see AAF93436-38) encoding S. aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see AAW31552-54) that confer protection against S. aureus infection. CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The epitopes are also contemplated for use in the preparation of vaccines and as carrier proteins in vaccine formulations, as well as in the formulation of compositions for the prevention of S. aureus infection. pCF33 and pDD (see AAW31556) were used to raise anti-MCFDAMM COLUMNIANA COLUMN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Clostridium botulinum type G toxin C fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibody that interacts with collagen binding domain of Staphylococcal cna gene product - useful to prevent bacterial sepsis in animal infected with Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 1998-008801/01.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proteins are E. coli, insect cells and yeast cells. The recombinant toxins are used as immunogens for the production of vaccines and antitoxins that are useful in the treatment of hum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of the histidine-tagged C fragment of Clostridium botulinum (113/30 strain) type G neurotoxin, encoded by a DNA sequence (see AAV30596) in plasmid pETHISb. This vector can be used to express BotG soluble C fragment in Escherichia coli host cells, with the recombinant C fragment being purified on affinity column. The invention relates to recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Host cell containing recombinant expression vector encoding Clostridium botulinum type B or E toxin - useful to treat human and other animals at risk of intoxication with clostridial toxin

The present invention describes genes, proteins and antigenic polypeptides isolated from Enteroclis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for acids. Products from the present invention can also be used for acids.

Products from the present invention can also be used for screen compounds to identify agonists and antagonists of E. faecalis p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a protein isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus antibodies in a sample acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein

                                                                                                                                                                                                                                                                           1014
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a protein isolated from Enterococcus faecalis. The present invention describes genes, proteins can and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus antibodies in a sample of cacids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein activity.
                                              E.coli optimised KGF-2 mutant protein sequence.

disease, nephrotic syndrome, trauma and crush injuries, gastrointestinal and lymphatic fistulae, and protein-losing gastroenteropathies. The methods can also be used to treat hypoglobulinaemia, total protein loss, damage to the sinus epithelium, and can be used to increase proliferation of epithelial cells of the bladder or prostate, stimulate proliferation of the salivary gland cells and to increase Goblet cell proliferation for
                                                                                                                                                                                            vasculitis, ulcerative bowel disease, serositis, subacute bacterial endocarditis, liver disease, amyloidosis, malnutrition, malignancy, congestive heart failure, constrictive pericarditis, cardiac valvular
                                                                                                                                                                                                                                                                                                                                                                                                                     gland cells, lacrimal gland cells, sinus epithelium, and Goblet cells. The methods can also be used to treat hypofilminogenaemia caused by a cirrhosis, and disseminated intravascular coagulation (DIC). The methods can be used to treat thrombocytopaenia and to alleviate hypoalbuminaemia. These diseases are caused by drug induced hypersensitivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                disseminated intravascular coagulation; thrombocytopaenia; myelofibrosis; hypoalbuminaemia; posttransfusion purpura; metastatic tumour; anaemia; hypoalbuminaemia; posttransfusion purpura; metastatic tumour; anaemia; leukaemia, haemolytic syndrome; Zieve's syndrome; rheumatic disease; HELLP preeclamptic syndrome; congenital rubella syndrome; systemic lupus; Epstein-Barr infectious mononucleosis; thyrotoxicosis; uraemia; therapy; infection; tissue necrosis; vasculitis; ulcerative bowel disease; serositis; subacute bacterial endocarditis; liver disease; amyloidosis;

(I) is also useful for increasing the adherence of skin grafts to wound beds and to stimulate re-epithelialization from the wound bed, to produce changes in hepatocyte proliferation, to reduce the side effects of gut toxicity, to regenerate skin in full and partial thickness skin defects, and to prevent and heal damage to lungs. KGF-2 shows enhanced activity, increased stability, higher yield and better solubility. This sequence represents the human KGF-2 protein construct pQE60-Cys37 described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Keratinocyte growth factor; KGF-2; epithelial cell proliferation; wound; mucositis; ulcer; inflammatory bowel disease; liver disorder; lung damage; diabetes; oral injury; gastrointestinal injury; epidermolysis bullosa; renal failure; brain injury; proctitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB61673 standard;
                                                                                                                                                                                                                                                                                                         02-JUL-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200102433-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Unidentified.

The present sequence is a KGF-2 construct protein, which was generated in the present invention. KGF-2 can be used to stimulate epithelial cell proliferation in a patient, where the patient has a wound, mucositis, an ulcer, inflammatory bowel disease, liver disorder, lung damage, diabetes, oral injury, gastrointestinal injury, gut toxicity, epidermolysis bullosa, skin graft, skin disorder, renal failure, brain injury, breast tissue injury, urothelial damage, femmale reproductive tract disorder, intestinal fibrosis, proctitis, pulmonary fibrosis, peunrumonitis, plural retraction, haemopoletic syndrome, and myelotoxicity. In addition, KGF-2 can be used in the liver. KGF-2 also promotes internal healing, donor site healing, internal comments as a surgery in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A polynucleotide encoding the human keratinocyte growth factor useful for stimulating epithelial cell proliferation in a patients that has e.g a wound - \,
